

## Event Object Structure

All event should be on one object both past and upcoming events.

### Event Properties

```
const events = {  
  type: past or upcoming  
  title: event title  
  summary: event summary  
  description: total body of the event  
  image:  
  date: event date  
  time: event time  
  venue: event venue  
  host: event hose  
  speakers: [  
    {name, img, about(a brief about the person)}  
  ]  
}
```

**Note:** Event speaker is an array of object of the speakers at the event each object containing details of each speaker. It can be null if there will be no speaker.
